STACX.

Still Doing Manual Post-Closing?

Automate with STACX.

Post-Closing is complicated, Your software shouldn't be.

STACX- our in-house post-closing solution that simplifies and fast-tracks the entire process to help you move loans more confidently to the secondary market. STACX is a SaaS solution that leverages AI, OCR and ML to support mortgage lenders and servicers by creating an automated workflow solution that enables you to have an improved auditing process and sell more loan packages with higher accuracy at ease.

STACX automates the manual process of stacking, quality control, separating recordables and signature validation as a streamed process- in minutes; time to get rid of the manual work and labor-intensive QA checks.

STACX.

How STACX Works:

- **Data Ingestion:** STACX pulls in signed closing packages through multiple secure methods

- **Classification and extraction:** Smart character recognition indexes, classifies and extracts key data elements from loan documents

- **Manage exceptions and fix anomalies:** Unclassified documents or those with low confidence levels can be quickly checked, with manual corrections made easily

- **Validate and export:** In-built, client-defined quality controls enable a final review, while an open API framework supports export to any system

- **Automatic E-recording**

- **Reporting and analytics:** Advanced reports and dashboards display file status on the go

Easy Integration with LOS

STACX leverages open API to easily integrate with existing LOS to have your team up and running in days.

Integrations:

Simplifile   Resware   CSC   Encompass   ERNST
